

GLOBAL FREELANCER RAW

Project objective

- To analyse freelancer details such as hourly rate, experience, and project count from the dataset.
- To compare freelancer performance by studying active and inactive status.
- To identify relationships between experience, hourly rate, and total projects completed.
- To present the analysis using simple Excel charts and tables for clear understanding.

Dataset Description

This dataset contains detailed information about freelancers from various countries. It includes personal details, skills, experience, hourly rate, and project data. The dataset also provides activity status, client satisfaction, and performance metrics. It can be used to study freelancer trends, work patterns, and overall performance.

Column Description

- Freelancer Id - The Unique Id for Each Freelancer.
- Name – Name of the freelancer.
- Gender – Gender of the freelancer.
- Age – Age of the freelancer.
- Age Category – Category of the age.
- Country – Country of the freelancer.
- Language – Freelancer of the language.
- Country Language – Combination of Country and Language.
- Primary Skill – Main skill of freelancer.
- Year of Experience – Experience of freelancer.
- Rating – Performance Rating.
- Notes – Reviews Notes.
- Status – Freelancer status (Active, Hold, Inactive, Complete, On hold)
- No of the Project – Done of the Project.
- Duration Month – Total duration of work in month.

Descriptive Analysis

This analysis explains the overall summary of the dataset, including the distribution of freelancer experience, hourly rate, rating, and satisfaction levels. It gives a clear picture of how freelancers vary across different skills and earning categories.

Diagnostic Analysis

This analysis identifies the reasons behind the patterns in the data. Higher experience leads to higher hourly rates, while lower ratings and satisfaction levels reduce project opportunities and increase the chances of freelancers becoming inactive.

Predictive Analysis

Based on trends, freelancers with higher ratings and satisfaction are likely to receive more projects in the future. Increasing experience levels show a predictable rise in hourly earnings.

Conclusion

The dataset shows that most freelancers are active and experienced, which boosts their project counts and overall performance. Experience, rating, and client satisfaction strongly influence hourly rates, project quality, and future opportunities. There is no major gender difference in earnings, indicating fair and equal opportunities across the platform. Overall, the dataset clearly highlights freelancer productivity, engagement levels, and income growth trends.
